

# Business Risk Management Essentials & Strategies

**Duration:** 5 Days

**Language:** en

**Course Code:** MG2-108

## Objective

Upon completion of this course, participants will be able to:

- Familiarise yourself with the best practices related to risk management.
- Create a viable risk management framework for development within your own business.
- Understand the ISO31000 formal risk management structure.
- Evaluate current procedures and processes and identify risks.
- Build a successful and high-performance problem-solving team.
- Learn international risk management standards and what they mean to you.
- Implement methods of critical thinking when deciding on risk factors.
- Analyse the root cause of problems and develop innovative methods of change.

- Prioritise financial and operational risks for mitigation.
- Learn to be confident in deciding when a risk is too much and liaise with teams involved to relay these messages.

## Audience

This course would be suitable for any professional who is involved in wider business development or change management to help mitigate risks during large-scale business change. It is particularly suitable for:

- Risk Management Professionals
- Change Managers.
- Planning Managers.
- Operations Managers.
- Developing Managers.
- Supervisors.
- Team Managers.
- Health & Safety Managers.
- HR Personnel.

## Training Methodology

This course utilises various adult learning techniques to develop effective risk management frameworks. It includes trainer-led lectures, groups, seminars, and discussions to help understand where risks appear and how to mitigate them within different business structures.

You will receive data-driven management models and secure real-life case studies to identify where change is required and push to create innovative solutions within your working group to achieve the best outcome.

## Summary

The ultimate goal of any business is to achieve maximum profit. However, to do this will always come with risks. If you are your business's decision-maker, you will need

to understand which risks will result in a worthwhile return on investment and which may cause you a detriment.

Risk management is the skilled practice of weighing up a decision's potential causes and costs against the gains and losses it may achieve. Developing a foolproof operational process requires calculation, accurate and sophisticated data analysis, and extensive project planning.

Creating a risk management framework also involves considering the employees involved in change, understanding their skills, knowledge, and culture to determine any potential causes and effects of hurdles that may arise, and creating attainable KPIs to manage performance and keep changes on track for profitability.

## **Course Content & Outline**
