

MBA Accounting and Finance

Duration: 10 Days

Language: en

Course Code: PF1-103

Objective

Upon completion of this course, participants will be able to:

- Develop a working knowledge of income statements and balance sheets.
- Identify cost-effective processes and risk areas.
- Look for cost behaviour by the department and make positive improvement suggestions.
- Create a budgeting process and impart knowledge to other departments based on this.
- Recover from financial downfalls.
- Understand governance mechanisms.
- Motivate others when considering cost implications in change plans.
- Use Baldrige performance criteria as a benchmark for success against competitors.
- Review the business's future goals and align with key accounting decisions to ensure success.

Audience

This course is built for people who are responsible for the accounting functions within a business or are required to consider finances as part of their role to move forward and develop processes. It would be most beneficial for:

- Chief Financial Officers
- Finance Managers
- Accounting Managers
- Operational Managers
- Directors
- Business Owners
- Supervisors or Team Leaders
- Project Planners
- Support Function Management

Training Methodology

This course uses a range of learning techniques to uncover the importance of strategic planning regarding finances and accounting. It includes interactive presentations and seminars to discuss real-life project management and financial thinking alongside group activities to create project planning frameworks to mitigate areas of financial risk.

Summary

Having accurate and efficient accounting and finance processes, employees, and systems are essential to any business. Without good record upkeep, policies designed to keep track of spending and overheads, and competent employees who are prepared to identify issues and risk areas, your business could fall foul of overspending, causing you to have reduced profit margins.

Understanding your accounting strategy is important to making the best financial decisions for your business and staying ahead of the game. This involves considering your systems vs. employee resources and automating processes where required, providing a safe and positive physical environment for your employees, and discovering premium products and services to enable you to secure a higher return on investment.

The role of accounting and finance requires an individual to have an overview of all working processes and departments to understand how the business works as a whole. They will be responsible for paying taxes and identifying areas for improvement based on the business' spending habits, risks, and future goals.

Course Content & Outline

Section 1: Your Team & Your Finances

- Financial considerations when managing a team.
- Sociotechnical management.
- The benefits of remote and hybrid working for a business.
- Process automation gains and losses.
- The role of CFO, controller, or treasurer.
