

Advanced Budget Management and Cost Allocation

Duration: 5 Days

Language: en

Course Code: PF1-104

Objective

Upon completion of this course, participants will be able to:

- Create effective business models focused on financial planning.
- Familiarise yourself with different types of budgeting and which would be most successful for your business.
- Identify areas of improvement and cost waste and work to save money.
- Understand how your project planning and staff management directly impact your finances.
- Create essential risk-management models to move your business forward securely.
- Identify opportunities for strategic development based on financial backing.
- Gain knowledge on various financial planning models to focus your projects.
- Develop action plans for budget recovery during times of overspending.

Audience

This course is great for anyone who manages department budgets or is in charge of change management and requires a financial plan to move forward. It would be particularly beneficial for:

- Business Owners
- Finance Managers
- Operations Managers
- Operations Directors
- Planning Managers
- Change Managers
- HR Personnel

Training Methodology

This course uses a range of theory-based budgeting models to develop a usable framework and a cost-effective change plan. You will also participate in group discussions and trainer-led seminars to discover streamlining processes to remove waste from your organisation's future.

You will view real-life case studies and financial assessments to determine the risks and mistakes made by other businesses. Then, using lessons learned and accurate data analysis,

you will understand ways to reduce costs and increase profits within your business.

Summary

Businesses need savvy budgeting systems and reporting techniques to ensure that money is allocated to the necessary areas to stay profitable and ahead of the competition.

Stakeholders and clients need to know that the money they invest in the business is used wisely. Implementing a budget management framework that uses funds to benefit everyone involved can be challenging. Your organisation's future depends on your prioritisation framework and budget allocation.

Budget management encompasses the whole of the business as it determines the amount you can spend on progression by updating systems and adding in automation. The amount you spend on your systems and processes also gives you a base figure to recruit those all-important employees that make your business run smoothly and allow you to become a competitive employer.

An accurate cost-benefit analysis of new processes, system changes, recruitment, and waste removal could mean the difference between a thriving and profitable company and one that haemorrhages money, creating a struggle to move forward.

Course Content & Outline

Section 1: Budgeting In Your Company

- How does your budget affect your business?
- Developing accurate accounting principles.
- The benefits of cost management.
