

Finance and Accounting for the Oil & Gas Sector

Duration: 5 Days

Language: en

Course Code: IND01-119

Objective

Upon completion of this course, participants will be able to:

- Examine long-term strategic challenges specific to the oil and gas sector.
- Understand important financial accounting and reporting principles.
- Identify economic, financial, and commercial drivers.
- Convey effective and prompt information to key stakeholders.
- Enhance measurement, controls, and performance reporting

Audience

This course is intended for:

- Professionals in the oil and gas industry
- Board members and other stakeholders in the energy sector
- Anyone looking to understand the unique aspects of financial accounting for oil and gas

Training Methodology

This course uses a variety of adult learning styles to aid full understanding and comprehension. Participants will review case studies to highlight key areas of importance and possible areas for faults. They will be supplied with the best tools required for learning exercises to improve their skills. Participants will analyse the examples to thoroughly understand how these skills, techniques and methods apply in the workplace.

Summary

The oil and gas sector has unique accounting needs. Exploration and development, production and sales, and the impacts of the energy market all influence how finance and accounting are tracked and measured.

This course targets non-finance professionals who want to understand the financial structures and implications that affect the oil and gas industry. You will examine accounting specific to exploration and production activities, assess costs associated with reserves, and evaluate risks and costing strategies for energy businesses. In addition, you will also explore financial reporting for the oil and gas sector.

Course Content & Outline

Section 1: Overview Of The Oil And Gas Sector

- Describe the role of Exploration and Production (E&P) in the oil and gas sector.
- Review the business environment of E&P.
