

Healthcare Operations Management

Duration: 5 Days

Language: en

Course Code: IND05-104

Objective

Upon completion of this course, participants will be able to:

- Ensure all operations are carried out appropriately and cost-effectively.
- Improve operational management systems, processes and best practices.
- Manage budgets and forecasts.
- Perform quality controls and monitor production KPIs.
- Develop strategies to improve the operational efficiency and effectiveness of healthcare facilities.
- Understand the cost concepts and service costs.
- Understand legal compliance and how regular medical facility audits can help work towards these.

Audience

This course is specifically for those in a senior or executive healthcare role, especially for Operations Managers who aim to develop processes and procedures to improve the future of their facility. It would be most beneficial for:

- Operations Managers
- Chief Financial Officers
- Chief Executive Officers
- Chief Quality Officers
- Administrative Directors
- Risk Management Staff
- Patient Safety Officers
- Senior healthcare staff
- Executive healthcare staff

Training Methodology

This course combines lectures and group discussions, providing the latest methods and strategies to maximise participant training.

Participants can present specific problems using group problem-solving exercises and provide various solutions. During this course, they will learn how to effectively manage costs and improve productivity through trainer-led presentations and real-world case study evidence. They will also develop their communication style through role-playing activities.

Summary

Hospitals and other healthcare facilities contain many moving parts. At any given time, various healthcare professionals administer primary, secondary, and tertiary care to patients facing various healthcare challenges. Alongside caregivers, hospitals need administrators to oversee the daily operations that enable optimal care professionals who manage medical supplies, oversee staff, and maintain policies and regulations to conduct their role in a cost-effective manner. This is where the role of a Healthcare Operations Manager comes into play.

A Healthcare Operations Manager directs a hospital or healthcare facility's staffing, resources, finances, and procedures. They work in any healthcare facility, including outpatient treatment centres, hospitals, and nursing homes.

Without an Operations Manager, any healthcare facility would likely cease to function effectively and cost-effectively. For the business and staff members to function correctly, a healthcare facility requires carefully formulated strategic and operational objectives. Operations Managers can also help hospitals and care facilities become legally compliant with their procedures.

A Healthcare Operations Manager is essential for ensuring that a hospital thrives and doesn't face unnecessary expenses, disruption to service, legal risks, and poor quality of service. Due to their extensive

leadership skills and outstanding organisational skills, they can demonstrate how smoothly any facility should operate. If there are any disturbances, then they can demonstrate how best to handle them, too.

Course Content & Outline

Section 1: Financial Management

- Learn the difference between direct and indirect costs.
- Understand how management influences costs.
- Learn fixed costs and variable costs.
- What is ABC, and when is it used?
