

Capital & Debtors Management

Duration: 5 Days

Language: en

Course Code: PF1-113

Objective

Upon completion of this course, participants will be able to:

- Develop an understanding of what working capital means to your organisation.
- Predict future trends and protect your company's capital.
- Manage debt efficiently and understand where debt may be positive for your business.
- Understand the key liquidity ratios.
- Create operational recommendations based on capital earnings activities.
- Make key decisions regarding alternative credit policies and debt management.
- Make strategic choices to avoid financial risks.
- Understand the differences between internal working capital management and external interpretations of capital management.

- Manage inventory, terms of sale, and discount periods based on the company's credit period, revenue, and goods and services.

Audience

This course is designed for anyone responsible for managing and reporting on a company's finances and capital accounts to stabilise the financial position or make recommendations to secure the company's financial future. It would be most beneficial for:

- Chief Financial Officers
- Treasurers
- Business Owners
- Accountants
- Financial Risk Assessors
- Operations Managers

Training Methodology

This course used various adult learning methods to aid full understanding and comprehension. Participants will be engaged in fact-finding sessions on a group level to understand how capital management directly affects each area of their own company.

They will review presentations to develop their debt and capital management skills and see real-world examples of positive management by other financially successful companies. Finally, they will be presented with tools and techniques to manage their capital and identify financial risks they can take away and implement in their job roles.

Summary

Every company will have debts to manage and capital to maintain by using profits and income wisely. Typically, a company in some form of debt is a company that manages well to keep its taxes in order, manages its profits sensibly, and makes its money work for it. What many people don't realise is that some debt is good.

Capital management means correctly utilising the inventory and stock and moving the money received and paid out sensibly to maintain the highest interest turnover and lowest tax implications.

Capital management can be a complex concept, but it requires a working knowledge of the whole operation to understand how to minimise the number of expenses paid out and use working capital to make the operation run smoothly.

The most important thing to learn about managing capital effectively is to look to the future. Future forecasting, predictions, market evaluations, and competitor critiques will allow a finance professional to understand where the market is likely to dip and what trends may hurt business capital. This will point to sensible and solid investments that will protect the capital going forward and increase the business's

success while protecting against financial risk.

Course Content & Outline
