

# Treasury Risk Management & Products

**Duration:** 5 Days

**Language:** en

**Course Code:** PF1-114

## Objective

Upon completion of this course, participants will be able to:

- Manage liquidity and working capital.
- Understand your cash flow in relation to your operation.
- Highlight financial risks and place them in risk management and contingency procedures.
- Reduce financial costs for the business using a cost-benefit analysis.
- Recommend appropriate recovery methods in times of financial hardship.
- Evaluate your capital investment opportunities and build beneficial working relationships.

- Implement a risk management strategy with the aim of continuous improvement.
- Understand hedging and make sound risk management decisions.

## Audience

This course is designed for anyone who highlights financial risks and creates strategic prevention measures within an operation. It would be most beneficial for:

- Business Owners
- Treasurers
- Operations Managers
- Chief Financial Officers
- Finance Professionals
- Financial Decision-makers
- Risk Assessors
- IT Professionals

## Training Methodology

This course uses various adult learning methods to aid full understanding and comprehension. Participants will view videos and presentations to discover the best treasury processes and procedures financially successful companies use and learn about common risk areas.

They will have the most up-to-date technology tools to make financial decisions and predict future trends using forecasting methodology and reporting. They will also work in groups to discover the most efficient cost-saving procedures to be implemented in their own companies.

## Summary

Managing risks within your businesses is a monstrous task. You need to review each function and operational change to ensure you aren't putting extra strain on your processes or profits.

One of the biggest areas of risk in every company is managing finances. Treasury risk management means gaining an understanding of the whole business, where profits and losses are made, and how to use financial tools to maximize money.

It's also important to study trends and predict future potential downturns to develop workable recovery solutions in times of greater financial risk. Treasury tools and techniques should be combined with the best financial technology to help determine solutions to cash flow shortages and create beneficial relationships with partners to aid financial recovery and success.

Treasury experts should also consider the financial products they use to aid forecasting and establish risk management solutions through liability management, inventory management, and trading simulation. For companies with a global reach, exchange rates, currencies, and tax rates must also be considered changeable processes that could pose a financial risk.

## Course Content & Outline

### Section 1: What Does Treasury Risk Management Mean?

- The role of a treasurer.
- Identifying risks and how this can help the wider company.
- The use of treasury products to aid financial change.
