

## Sustainable Finance Development

**Duration:** 5 Days

**Language:** en

**Course Code:** MG2-140

### Objective

Upon completion of this course, participants will be able to:

- Understand the strategic implications of financial sustainability.
- Review your processes and find more sustainable options.
- Understand the impacts of ESG on the wider environment.
- Manage complex procedures and reduce budget burn.
- Create a framework for future investments and spending.
- Understand financial terminology and insights.
- Review reporting methods and identify where changes could be made.
- Develop your communication methods, reach out to partners and share an ethical business vision.

- Future-proof your business by securing a positive reputation.

## Audience

This course is designed for anyone responsible for upgrading financial processes to improve the company's focus on sustainability. It would be most beneficial for:

- Business Owners
- Chief Financial Officers
- Financial Advisors
- Planning Managers
- Directors
- Change and Control Managers
- Data Analysts

## Training Methodology

This course uses various adult learning methods to aid full understanding and comprehension. Participants will watch videos and participate in interactive presentations to explore the benefits of considering sustainability when making financial decisions.

They will discover innovative techniques and tools to assess the company's sustainability model and highlight pain points where processes could be improved. They will then conduct group activities to uncover the best ways to predict financial change and create a detailed financial roadmap for positive change in their organisations.

## Summary

One of the main things that people look for in a business, whether from the angle of a partner, supplier, or consumer, is sustainability. People will look more favourably at your business if it significantly contributes ethically or financially to socio-economic factors or benefits the wider society or local areas.

Sustainable finance means that your business contributes environmentally or socially, making you a more reputable source for purchasing and presenting a good reputation for future growth. This often means looking at your processes and perhaps portioning off a section of your profit to provide sustainable sources. You could also review your processes and switch to more sustainable methods, resources, or suppliers to contribute to wider societal change.

Environmental, Social, and Governance (ESG) investing is also viable. It involves researching resource suppliers and partnerships to invest your profits in low-risk business models that positively impact both you and others in your field.

Acknowledging and reviewing this long-term ethical vision and actively contributing to sustainable development will help you tighten your processes, increase your profit margins, and secure your future turnover and positive reputation.

# Course Content & Outline
