

Portfolio & Asset Management

Duration: 5 Days

Language: en

Course Code: PF1-122

Objective

Upon completion of this course, participants will be able to:

- Develop an effective financial strategy based on previous portfolio monitoring.
- Understand financial terminology associated with asset management.
- Maintain the optimum portfolios for business continuity.
- Analyse the features of each portfolio and suggest a sensible strategic change.
- Assess a broad range of assets based on market change.
- Understand the effects of sustainable processing on your portfolios.
- Capture consistent data to fuel future development.
- Gain an advantage over competitors using market research.
- Understand the practical issues with multi-asset investments.

Audience

This course is designed for anyone responsible for developing or transforming financial asset portfolios to assist with making positive financial decisions. It would be most beneficial for:

- Business Owners
- Chief Financial Officers
- Account Managers
- Data Analysts
- Portfolio Construction Professionals
- Asset Management Specialists
- Project Managers

Training Methodology

This course uses various adult learning techniques to aid full understanding and comprehension.

Participants will review current market trends and examine various real-world examples to understand the positives and negatives of asset spreads.

They will undergo group discussions to create strategic project plans and review example datasets to identify where changes need to be made to secure business finances. They will be presented with the most up-to-date software options and tools to make accurate financial decisions, review the possible outcomes of their planned decisions, and learn how to create contingency plans for any errors.

Summary

As a business grows, it's important to protect each department from financial risk. Financial professionals must understand asset allocation and distribute monetary assets between cash, bonds, stocks and shares, and real estate. This method helps to spread the risk of financial loss, meaning that when an issue arises, or a downturn in the market occurs, a business isn't left struggling financially by putting all of its eggs in one basket.

To effectively manage a portfolio of assets, it's important to understand the financial market across various sectors and keep up to date with changes based on software, technology, and sustainability requirements. Understanding the terminology and best practices within the banking environment is important for making the best decisions and creating a beneficial asset portfolio to secure the business's future.

When making portfolio amendments and decisions, it's essential to review previous data, manage performance and monitor changes in the market. This performance measurement will help you to develop the best strategies going forward.

Course Content & Outline

Section 1: Financial Trends in Asset & Portfolio Management

- The most recent changes and reasons for the changes in financial asset management.
- Understanding how sustainable processes can affect your decision-making.
- Software development to achieve more accurate data models.
