

Oil & Gas Risk Management

Duration: 4 Days

Language: en

Course Code: IND01-132

Objective

- To understand key risk management concepts and principles.
- To identify internal and external influences of risk.
- To explain the importance of risk appetite and risk tolerance.
- To understand risk frameworks including COSO and ISO 31000.
- To define risk measurement criteria that supports risk analysis.
- To identify risk categories.
- To develop communication techniques during risk audit-related engagements.
- To interpret the nature of residual and inherent risk.
- To utilise risk management concepts during risk-based audit engagements.

Audience

This course is designed for anyone responsible or involved in risk management who wishes to develop their skills and knowledge. It would be most beneficial for:

- Project Managers
- Risk Assessors
- Auditors
- E&P Managers
- Internal Audit Managers
- Internal Audit Practitioners
- Environmental Compliance Specialists
- Compliance Officers
- Chief Risk Officers (CROs)

Training Methodology

This course uses a variety of adult learning styles to aid full understanding and comprehension. Participants will review and analyse real-world risk assessments and audits within the gas and oil industry and highlight potential risks and resolutions that they would face within their respective roles.

They will be presented with the necessary tools to develop a thorough understanding of risk management. Using these tools, they will undergo learning exercises where they will assess risks within a role, and practice conducting risk audits utilising major risk-based audit frameworks. Through group discussions, participants will communicate to others their audits. These methods will allow the participants a complete opportunity to gain a comprehensive understanding of the taught content.

Summary

The gas and oil industry is prominent globally. It is crucial for anyone working within this industry to understand the potential risks involved, whether that's financial, operational, compliance, or even health and safety risks.

The key to risk management is first to assess the regulations where the organisation is located, and all initial risk assessments should be created in compliance with local laws and legislations. Following on, a full analysis of current potential risks would be required from every aspect of the business to be accurately reviewed and detailed in a risk assessment and audit. Gaining an in-depth picture of current issues and providing solutions is vital for predicting future complications and preparing for them.

All those holding responsibility for risk management should be educated and knowledgeable on the variety of risk-based frameworks available. A widespread understanding of these frameworks will prevent misinterpretation while reviewing audits. To correctly engage with others regarding risk management in both verbal and written formats is essential and are crucial skills to obtain and develop.

The gas and oil industry is ever-evolving, and it is necessary for risk management to consistently keep up-to-date to ensure risks are kept to a minimum and contingency plans are created.

Course Content & Outline

Section 1: Internal Auditing

- Defining internal auditing.
- International Standards for the Professional Practice of Internal Auditing.
- The vitality of risk-based internal auditing.

Section 2: Principles of Risk Management

- The definition of risk.
