

## Project Risk Management: Effective Decision-Making & Compliance

**Duration:** 5 Days

**Language:** en

**Course Code:** PO4-101

### Objective

Upon completion of this course, participants will be able to:

- Identify where change is needed to work towards continuous improvement.

- Evaluate risks and single points of failure within current processes and make comparisons to future processes.
- Communicate projects effectively to gain support from stakeholders and employees.
- Understand when a project isn't working out and make changes to correct problems.
- Work within a set budget to effectively change processes for the better.
- Create a cost-benefit analysis of planned changes to ensure a return on investment.
- Accept leadership responsibilities and delegate effectively to achieve a positive outcome.
- Implement a performance management structure to manage against key objectives.
- Understand the implications of regulations and compliance measures and create an action plan to implement procedures that adhere to standards.

## Audience

This course is great for anyone who is responsible for managing a project or mitigating risk factors within a growing or changing business. It would be especially beneficial for:

- Planning Managers
- Change & Control Managers
- HR Personnel
- Operations Managers
- Business Owners
- Directors
- Team Leaders
- Supervisors

## Training Methodology

This course uses a range of combined adult learning styles including self-assessment surveys, group discussions and training-led role-playing sessions to determine your current role in the project management process and seek out development areas. You will then use a project plan matrix to discover the most cost-effective way forward for your business, using change and risk assessment models based on real-life scenarios to move forward and secure your return on investment.

## Summary

To manage a project effectively and achieve a positive outcome, you must understand how to identify and manage potential risks and mitigate them against a budget plan. You need to make informed and calculated decisions to benefit your department, wider business, and employees and create an end product that works for your stakeholders and consumers.

Developing an effective plan requires you to assess opportunities and threats to move forward and take a proactive approach to change, gaining the support of your colleagues and partners along the way. You'll need to discover a solution that covers all bases and complies with your organisation's key goals. You'll also need to develop a monitoring and assessment process to understand your weaker areas and work on strategies that aid continuous improvement.

You will need to devise key performance indicators that support your project plan and create performance management procedures to motivate and inspire your team to work towards the same end goal.

## Course Content & Outline

### Section 1: Planning & Introduction to Change

- Why change is important.
- Setting a clear goal.
- Understanding the benefits of risk management.
- What it means to be a key decision-maker.
- Different types of risk and what they mean for your project.
- The project lifecycle.

### Section 2: Identifying Risks

- The 6 steps of risk management – (PMBOK)
- Planning for risk.
- Risk identification.
