

## Productive Maintenance Procedures

**Duration:** 4 Days

**Language:** en

**Course Code:** IND14-106

### Objective

**During this course, you'll learn:**

- To understand the importance of productive maintenance procedures within an organisation.
- To explain the concepts, principles, and purpose of productive maintenance procedures, primarily Total Productive Maintenance (TPM).
- To recognise the consequences of poor productive maintenance procedures.
- To explore what internal and external factors may influence maintenance procedures.
- To evaluate and determine the overall equipment effectiveness (OEE) of machinery.
- To utilise various methods and techniques to improve the efficiency of tools and machinery without sacrificing safety.
- To analyse machinery regularly and predict where failures or potential risks are likely to occur.

## Audience

This course is designed for anyone involved in or responsible for the maintenance of heavy machinery or ensuring productivity in a maintenance setting. It would be most beneficial for:

- Operations Managers
- HSE Officers
- Production Managers
- Senior Engineers
- Maintenance Directors
- Continuous Improvement Managers
- Labour Relations Managers

## Training Methodology

This course uses a variety of adult learning styles to aid full understanding and comprehension. Participants will review case studies of established organisations and how they have integrated TPM into their standard practices to highlight key features and changes that have led to increased productivity.

Participants will be offered the opportunity to partake in a variety of different learning exercises and methods, including seminars, discussions, video material and practical activities. This combination of learning methods will guarantee the participants can develop a full and comprehensive understanding of the taught content and related skills.

## Summary

A range of industries and organisations strongly rely on the use of heavy machinery and potentially dangerous equipment. In an attempt to increase employee safety and productivity, these organisations may adapt various maintenance procedures. Total production maintenance is a maintenance standard that is becoming increasingly popular due to its effectiveness.

Total production maintenance (TPM) has its primary focus surrounding the health and safety of employees, by having them be responsible for the equipment they use. Having employees engage more closely with their equipment aids in knowledge development and allows them to become more aware of the equipment they are using. This can lead them to noticing issues or potential failures long before they occur.

Not only does it increase safety, but it is proven to increase organisational productivity. TPM has 8 main pillars, which all work with one another to guarantee the organisation can function as normal

and improve functions over time. TPM has a method of measuring equipment productivity that can highlight the true percentage of production and provides solutions to increasing this.

## Course Content & Outline

### Section 1

#### Introduction to Productive Maintenance Procedures

- Defining what productive maintenance procedures are, its necessity and importance within an organisation.
- Understanding what internal and external factors may influence the machine and employee productivity.
- Describing what total productive maintenance is and its history within the industry.
- Explaining what the 5S foundation of total productive maintenance is – sort, straighten, shine, standardise and sustain.

### Section 2

#### The Concept of Total Productive Maintenance

- Exploring the history of TPM and how it has evolved from its creation.
- Assessing the concepts, principles, and purpose of TPM.
- Identifying the 8 key pillars of TPM and understanding how they work hand in hand:
  - Autonomous maintenance
  - Planning maintenance
  - Quality maintenance
  - Focused improvement
  - Early equipment management
  - Training and education
  - Safety, health, and environment
  - TPM in administration
- Maximising productivity and health and safety throughout an organisation.

### Section 3

#### Overall Equipment Effectiveness

- Defining overall equipment effectiveness (OEE) and its role within TPM.
- Exploring the 3 main components of OEE – availability loss, performance loss and quality loss.
- Utilising various methods to accurately calculate the organisation's OEE by thoroughly assessing the different factors.
- Analysing OEE data to understand how much of the organisation's production time is genuinely productive.
- Comparing results to other organisations and to industry standards and creating a further development plan based on these results.

## Section 4 Planned and Autonomous Maintenance

- How regular maintenance is vital in preventing 'down-time' and reducing unproductivity.
- What is meant by the terms 'autonomous maintenance' and 'planned maintenance' In a TPM context.
- Increasing equipment safety by providing a sense of 'ownership' to the equipment operators.
- Guaranteeing the regular maintenance of equipment to prevent potential failures and emergencies.

## Section 5 Health and Safety

- How TPM prioritises employee's safety.
- Increasing employee's knowledge of equipment and procedures will allow them to better identify potential risks before they occur.
- Utilising TPM maintenance standards to regularly maintain equipment.
- Conducting regular risk assessments to identify all potential risks and create risk management plans in alignment with TPM standards.
- Ensuring full compliance with relevant health and safety regulations.

## Certificate Description

Upon successful completion of this training course, delegates will be awarded a Holistique Training Certificate of Completion. For those who attend and complete the online training course, a Holistique Training e-Certificate will be provided.

Holistique Training Certificates are accredited by the British Accreditation Council (BAC) and The CPD Certification Service (CPD), and are certified under ISO 9001, ISO 21001, and ISO 29993 standards.

CPD credits for this course are granted by our Certificates and will be reflected on the Holistique Training Certificate of Completion. In accordance with the standards of The CPD Certification Service, one CPD credit is awarded per hour of course attendance. A maximum of 50 CPD credits can be claimed for any single course we currently offer.
