

Risk Management & Corporate Finance

Duration: 5 Days

Language: en

Course Code: PF1-147

Objective

Upon completion of this course, participants will be able to:

- Discover valuable tools and systems to help with accurate financial planning.
- Understand your goals and prioritise your aims based on a SWOT analysis.
- To evaluate your current corporate finance structure and identify pain points.
- Apply good corporate governance principles to future change models.
- Conduct regular financial risk assessments to identify challenges in your future framework and mitigate issues.
- Identify new sources of potential capital and profit and create achievable goals to reach them.
- Develop financial reporting and monitoring mechanisms to stay on top of your corporate data.

Audience

This course is aimed at anyone involved in financial planning, scoping for a business, or

controlling a departmental budget. It would be particularly beneficial for:

- Finance Managers
- CFOs
- Business Owners
- Financial Support Team
- Project Managers
- Operations Managers
- Risk Managers
- Change & Control Managers

Training Methodology

This course will use a variety of learning styles, including presentations to understand financial planning obligations against corporate governance, practical exercises involving real-life case studies to identify where risks occur and how to mitigate them, and group discussions to create accurate frameworks and monitoring platforms for real-world use.

Summary

Developing a successful and profitable business requires a wide array of financial understanding to create a cost-effective roadmap for future developments, forecasting, and change. Risk management goes hand in hand with financial planning, as a foolproof framework will allow you to make sound, strategic decisions to move forward while maintaining your profit margins.

Many factors can affect business profits, including technology, staffing, contingency processes, health and safety procedures, and new policies. It's essential that project planners or business owners fully understand the implications of progression and changes within the business and their short-term and longer-term effects on the company finances. Creating a risk assessment and effective SWOT analysis will allow you to prioritise changes and mitigate risks in the financial structure based on their potential outcomes. Because the demands on businesses from their customers, clients, and stakeholders are increasing yearly, it's important to focus more on the potential end results of each change to determine an accurate cost-benefit analysis and maintain your obligations and corporate governance.
